Education

Indian Institute of Technology (IIT) Hyderabad
Bachelor of Technology (B.Tech)

2025
CGPA: 8.54

Professional Experience

AI Developer / Data Analyst, CuriousEd May 2025 – Present

- Designed and maintained **data aggregation and reporting pipelines** for structured and unstructured datasets, ensuring accuracy, completeness, and auditability of reported metrics.
- Designed interactive dashboards for operational metrics & data quality KPIs, supporting ad-hoc & recurring stakeholder reporting.
- Leveraged **LLMs, OCR, and metadata-driven workflows** to extract, validate, and standardize data from complex reports, reducing manual effort by 70%.
- Implemented transaction-level **data quality checks, reconciliation logic, and control frameworks** to identify reporting breaks, missing fields, and control failures, supporting audit-ready reporting.
- Mentored junior interns on **data governance practices, escalation frameworks, and reporting accuracy**.

AI/ML Intern, CuriousEd Jan 2024 – Jul 2024

- Automated reporting workflows using **AI-driven extraction and validation** (LLMs, OCR, RAG), improving evaluation accuracy by 89%.
- Developed end-to-end pipelines with **data lineage & quality controls** to ensure consistent & reliable reporting.

Goldman Sachs – Software Engineering Virtual Experience 2023

- Analyzed operational and security risks using leaked credential datasets; applied **control remediation techniques**.

JPMorgan Chase – Investment Banking Virtual Experience 2023

- Worked on **financial reporting, valuation analysis, and reconciliation checks** to ensure transaction-level data accuracy.

Projects

AML / Fraud Detection – Transaction Monitoring Project

- Designed rule-based & statistical controls to detect anomalous transaction patterns indicative of potential fraud risks.
- Built SQL/Python diagnostics to flag missing, inconsistent or high-risk transaction attributes and to support exception analysis.
- Evaluated false positives, documented control limitations, and proposed threshold and logic improvements to strengthen monitoring effectiveness.

AI-Driven Financial Data Analysis (Stock Price Prediction)

- Developed a **time-series financial analysis model** using Deep Q-Learning (DQN) to evaluate market trends.
- Implemented **risk-adjusted reward functions and backtesting logic** to measure performance varying market conditions.
- Documented **data sources, preprocessing steps, lineage, and validation controls** to ensure analytical transparency and reproducibility.

Skills

- Programming & Databases:** SQL, Python, PySpark, Teradata, Oracle, Snowflake
- Cloud & Tools:** AWS, Azure, Databricks, JIRA, Power BI, Tableau, Git
- Data Governance & Analytics:** Data profiling, source-to-target mapping, data lineage, quality checks, audit reporting
- Finance :** Transaction monitoring, AML/Fraud detection, financial reporting, risk analysis

Relevant Coursework

- Financial Markets (Yale), Finance for Engineers, Risk Analysis, Algorithmic Toolbox (UCSD), Advanced Numerical Methods, Applied Mathematics (Monte Carlo simulation, Scenario analysis & Stress testing), Probability & Statistics

Positions of Responsibility & Achievements

Head, Entrepreneurship Cell, IIT Hyderabad: Led 160+ students to organize E-Summit '24 with 5,000+ participants 140+ startups.
