SUMMARY

Data-driven professional with hands-on experience in **data engineering, SQL optimization, and scalable pipelines**. Strong foundation in computer science with exposure to **ETL/ELT, Spark, Databricks, and data management best practices**. Skilled in Python, SQL, and big data tools, with additional experience in applied AI and analytics

EDUCATION

Bangalore Institute of Technology, Bengaluru, Karnataka

Bachelors in Engineering – Computer Science & Engineering | 2021–2025 | CGPA: 8.5

TECHNICAL SKILLS

- **Data Science & ML:** Regression, Classification, Clustering, NLP, LSTM, Feature Engineering, EDA
- **Tools & Libraries:** Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib, Power BI, Tableau
- **Programming:** Python, SQL, Scala
- **Data Engineering:** Spark, PySpark, Kafka, Hive, Hadoop, HDFS, Databricks, ETL Pipelines
- **Cloud & DevOps:** Azure (ADF, Databricks, Storage), Git, GitHub, Shepherd, VELA
- **Certifications:** NPTEL – The Joy of Computing using Python (2023)

EXPERIENCE

Data Engineering Apprentice

Target Corporation [Bengaluru-India] | Feb 2025 – Aug 2025 | [LINK](#)

- Designed, enhanced, and maintained data pipelines for ingestion, transformation, validation, and backfill using **Spark, Kafka, orchestration tools, and HDFS**.
- Executed history redemption by **loading Hive tables to external tables; performed validations via Hive queries, shell scripts**, and scheduling workflows to improve completeness and reduce manual effort by 30%.
- Implemented **schema evolution by adding fields to pipelines and external tables**; used **SQL window functions** for time-based metrics; validated updates in staging and prod environments.
- Enhanced existing workflows by making them modular and reusable across business scenarios; implemented **dynamic file partitioning logic** to optimize dataset size.
- Configured **Kafka security**, consumer groups and topic definitions for automated ingestion; validated data with PySpark scripts against provided schemas and mappings.
- Performed **gap analysis for historical loads and partition audits** across environments to ensure data accuracy and consistency.
- Updated Gradle dependencies for consumer APIs; **tested REST API** endpoints in staging and production environments to ensure accurate post-change data loads.

Data Science Internship

IO Brain [Bengaluru-India] | Nov 2023 – Dec 2023 |

- Conducted exploratory data analysis (EDA) and feature engineering for health and agricultural datasets.
- Built and optimized ML models (Logistic Regression, Decision Tree, Neural Networks) achieving 90–97% accuracy across projects.
- Developed an LSTM-based language translation model using Word2Vec and Glove embeddings.
- Communicated findings with visualizations and metrics to improve decision-making accuracy.

PROJECTS

HelpMate AI (RAG + GPT-3.5 Turbo, LangChain)

- Built an AI tool to retrieve and summarize information from PDFs using Retrieval-Augmented Generation (RAG)
- Improved content retrieval efficiency by 40% by optimizing vector similarity search and reranking pipeline.

Diabetes Prediction Model (ML, Python)

- Trained and tuned classification models (Logistic Regression, Random Forest, Neural Network) on clinical data, achieving 90% accuracy.
- Applied EDA, correlation analysis, and feature scaling to improve model precision.

Crop Detection Model (ML, Python)

- Built CNN and feedforward networks for crop image classification, achieving 97% accuracy using outlier detection and balanced datasets.

Text Analysis Pipeline (NLP, Python)

- Automated web scraping, text cleaning, sentiment analysis, and readability scoring using BeautifulSoup, Pandas, and NLTK.

Data Optimization Pipeline (Spark, Scala)

- Designed scalable Spark workflows for data transformation and partition optimization, reducing file count and size by 20%.
